Gareth Hallberg

Lead Consultant at Nimble Approach
London, England, United Kingdom

Summary

Experienced Mobile Solutions Architect with a demonstrated history of working in the information technology and services industry. Skilled in Mobile Applications, iOS and Android development, back-end development and Social Media. Strong engineering professional with a MSc Creative Systems focused in Artificial Intelligence and machine creativity from University of Sussex.

Experience

Nimble Approach

Lead Consultant

July 2022 - Present (3 years 9 months)
Sheffield, England, United Kingdom

UnifiedRing

Mobile Solutions Architect

July 2020 - July 2022 (2 years 1 month)
London, England, United Kingdom

Kanto Systems

Lead Software Engineer

February 2017 - July 2020 (3 years 6 months)
London, United Kingdom

Initially I started as an iOS contractor. Within a few months I'd been offered a full-time role and took over the role of overseeing API development, managing the programming team and developing the iOS and Android apps used by the company. Most notably a canvassing app was used by several major political parties across Europe, the Caribbean and South America.

Myriad Group AG

Lead iOS Developer

June 2014 - January 2017 (2 years 8 months)
London - South Coast

Lead iOS developer for the Versy social media platform released March 2016. From concept through to delivery I've architected the iOS app and led the development team. The app is now live in the AppStore:

<https://itunes.apple.com/app/msngr/id945766196>

I initially joined Myriad as the lead iOS developer for the messaging app MSNGR which became Versy Social. The focus was on group chat with some groups having as many as 50,000 members. The app was a huge hit in Mexico and Latin America.

I took the project from initial concept to finished app in the AppStore. I architected the messaging app, mentored junior developers, liaised with external design agency, product managers and CTO.

Key skills :- Swift, core data, Objective-C, multi-threading, background data fetching, queue based event system (GCD and NSOperationQueue).

Userly

Senior iOS programmer

July 2013 - June 2014 (1 year)

London / Turners Hill

Beginning July 2103 I started at Userly - www.user.ly

I was one of the first hires at Userly and worked as part of a small team developing rich mobile experiences which integrated with a number of APIs.

The app effectively gives music artists their own social media platform. They can live stream video to their fans via their phone while getting live messages from the fans on the same screen, post updates, sell tickets to upcoming gigs, show forthcoming events and engage in conversation with their fans.

Worked on developing the iOS app for Disciple Media, an app for the music industry that allows artists to communicate directly with their fans. The app allowed talent to directly stream live video to their fans, via their phone while getting live messages from the fans on the same screen, post updates, sell tickets to upcoming gigs, show forthcoming events and engage

in conversation with their fans- read about what its become here: <http://www.disciplemedia.com>

Horseshoeshape

Director

April 2009 - June 2013 (4 years 3 months)

London / Hastings

Horseshoeshape was a small team of creative programmers who specialised in creating bespoke interactive software for museums, exhibitions and visitor centres. We created generative and algorithmic software in a variety of environments - anything from multi-touch applications to interactive kiosks to mobile devices.

Key Projects:

Jodrell Bank Discovery Centre – developed interactive software from initial idea through to delivery in conjunction with the Jodrell Bank scientists.

Madrid Centro Centro – developed multi-touch software in Madrid. Two large scale tables and an interactive wall.

Sky Skills Studio – programmed all custom software and CMS in the Sky Skills Studio at Sky HQ.

VISA London 2012 - developed all custom software for multi-touch table and Samsung S3 phone. User took pictures with the phone that are automatically uploaded to the table.

Vodafone - developed iOS apps for use by their sales teams.

Freelance Programmer

Programmer

2007 - 2010 (3 years)

As a freelancer I programmed multi-touch exhibition software for a number of companies including Engage Production, Met Studio, HB Source and FIVE33. End clients included Adidas, TMobile, Tower of London, Castrol and many more.

Key Projects:

Adidas – Paris, Milan and Barcelona. Interactive installation that was a combined photo booth / video performance recorder/ brand promotion. Touchscreens and cameras in a pair of “pods” with screens on a back wall that provided playback. I led the team of programmers.

TMobile (Engage Production) – 5 metre Multi touch table in the back of a lorry and four smaller versions in caravans. Software programmed using WPF/C#.

Tower of London (HB Source) - Five exhibits at the Tower of London. Interactive media rich visitors software.

Castrol (Engage Production) – multi touch software (WPF/C#) developed for Castrol's presence at Africa Cup of Nations 2009

SEAEC

Director Co-owner

September 2004 - July 2007 (2 years 11 months)

SEAEC was a software design/development company specialising in providing custom software for exhibitions and museums. My role was technical lead.

Key Projects:

Twelve interactive exhibits for award winning Hong Kong Wetland Park.
Five interactive exhibits for Saudi Aramco exhibition.

Boxed Web

Director co-owner

2000 - 2004 (4 years)

Boxed Web created software for interactive TV. Over thirty games were produced and released on the NTL and Telewest platforms. Web projects for London Marathon and British Midland. I was a co-founder of this self funded new media business.

Tasks:

Liaised with clients and advised on strategic direction.

Account managed existing clients and suppliers.

First to market with crossword app on interactiveTV in the UK.

Wrote software to generate thousands of crosswords and word searches.

Managed resources and recruitment of contractors to complement in-house skill set.

Ensured smooth delivery of Boxed Web's products and services within timescales and on budget.

Recommended product enhancements and helped clients exploit market opportunities.

Line

Designer

2000 - 2000 (less than a year)

At Line I designed the online museum for BT Connected Earth.

NTL

Applications Designer

1998 - 2000 (2 years)

At the time NTL was the largest cable company in the UK. The applications were for their initial interactive TV platform.

Education

University of Sussex

MSc Creative Systems, Artificial Intelligence and machine creativity · (2007 - 2009)
